With its revolutionary Midgate™, Avalanche is the only vehicle that can go from a six-passenger SUV with a 5.2-ft. cargo box to a three-passenger full-size pickup with a 8.1-ft. cargo box. That type of adaptability, combined with clever features like standard lockable, lighted side storage compartments located on both sides of the cargo box, cargo cover and five-link rear suspension (on 1500 models). Avalanche is also big on power, thanks to the strength of Vortec V8 SFI engines. And in early 2003, Avalanche will be equipped with the available WBH (Without Body Hardware) Package. With all it has to offer, it’s no wonder we call Avalanche the Ultimate Utility Vehicle. From the family of Chevy Trucks— the most dependable, longest-lasting trucks on the road. *Dependability based on longevity: 1981–July 2001 full-line light-duty truck company registrations. Excludes other GM divisions. NOTE: All claims are based on latest available competitive information. Excludes other GM vehicles.
1. REAR-SEAT CARGO ROOM
With both portions of the split-folding rear seat folded forward and the Midgate™ up, you get extra interior cargo space.

2. INTERIOR CARGO ROOM, FRESH AIR

Available features like eight-way power, premium heated front buckets with Custom Leather seating surfaces, and Bose speaker system mean no matter how rough it is outside, you’ll be comfortable inside. The Vortec engines in Avalanche deliver some powerful statements. The Vortec 5300 V8 SFI engine in Avalanche 1500 models delivers 285 horsepower. That’s more standard horsepower than a Ford SuperCrew, Ford Explorer Sport Trac or Dodge Ram 1500 Quad Cab. The Vortec 8100 V8 SFI engine, standard in Avalanche 2500, has more torque than V8 or V10 gas engines from Ford and Dodge. The strength of Vortec power in Avalanche.

Get more information on the Vortec engines and view an interactive demonstration using the attached CD-ROM.

Common Vortec V8 Engine Features:
- Sequential Fuel Injection (SFI).
- Platinum-tip spark plugs that can travel up to 100,000 miles before they’re scheduled to be replaced.*
- Platinum-coated spark plugs that won’t require replacement for up to five years or 150,000 miles (whichever comes first).*

*Maintenance needs vary with different uses and driving conditions. See your Owner’s Manual for more information.

**TRAILERING BASICS**

Towing requires appropriate high-performance power from your Chevy Truck, including suspension, brakes, steering, suspension, tire and brake systems. Easy and safe trailering requires proper equipment, additional towing capable full-size pickup trucks, and a thorough understanding of the tow vehicle requirements of both the vehicle and trailer. It is important to match the vehicle's requirements and following break-in and maintenance schedules. For more information, consult the Owner's Manual, speak to a trailing expert at your Chevrolet dealership or visit our website at chevy.com. The charts on the following page will assist in determining how to best equip your vehicle for trailering. To help you understand the charts, consider these trailing factors:

- **HORSEPOWER:** Generated to get your vehicle moving.
- **TORQUE:** Indicates the strength of the engine. Low-end torque reflects how much force is available to move the vehicle at low engine speeds.
- **REVOLUTIONS PER MINUTE (RPM):** Indicates how much work the engine does at a certain engine speed. At mid-range engine speeds, the engine is doing most of its work.

**Rear Gross Axle Weight Rating (RGAWR) or Gross Vehicle Weight Rating (GVWR):** These ratings can be found on the certification label located on the driver door or door frame. The Gross Combination Weight Rating is the total allowable weight of completely loaded vehicle and trailer.

**MAXIMUM TRAILER RATING:** This is the maximum towed weight plus tongue weight that your vehicle can tow. There must be no weight placed on the drive wheels beyond what the tires can comfortably support. Rear-axle ratios and the tire loads at which maximum trailering is possible are determined by the weight of the vehicle and normal tire loads.

**MASS-EFFECT TRAILERING:** This is the case where a heavily loaded vehicle (1,000 lbs. on 1500 models and up to 1,500 lbs. on 2500 models) cannot be pulled through a drive axle ratio combination, due to the weight of the vehicle. A properly equipped tow vehicle and trailer at the maximum GCWR can be found on the certification label located on the driver door or door frame.

**NOTE:** The safety steps described here are by no means the only precautions to be taken when trailer only after you have taken the following steps.

**TRAILERING CAUTION:** You must use the correct equipment to protect the structural integrity of your vehicle, the trailer, and the load that will be towed. Ask your Chevrolet dealer for advice about the proper trailering equipment for your new vehicle.

**TRAILERING HITCHES:** There are two types of ball hitches. A weight-carrying hitch connects the tongue weight to the trailer. A weight-distributing hitch uses spring bars to distribute the hitch weight to the tow vehicle's front axle.

**TRAILERING BRAKES:** Properly equipped trailer brakes are essential. Try to maintain a safe distance between vehicles. Set the parking brake and turn off the engine before using the tow hitch. Always check your hitch and towing equipment before every trip. When the trailer is unloaded, turn the parking brake off to maintain the towing distance.

- **NOTE:** If you have to make any holes in the body of your vehicle to install a trailer hitch, be sure to seal the holes if you ever remove the hitch. If they're not sealed, dirt, water and deadly carbon monoxide from the exhaust can get into your vehicle.

**WARNING:** If you don't use the correct equipment and drive properly, you can lose control of your vehicle when you pull a trailer. For example, if the trailer is too heavy, your vehicle may tilt sideways, pull to the side of the road, or pull to the right. If you have a load to pull, you must not be used with your vehicle. If everything checks out thus far, have a qualified individual make the brake fluid tap at the master cylinder port that sends fluid to the rear brakes. Don't use copper tubing, because it will bend and ultimately break. Use only double-walled steel brake tubing.

**AVAILABE TRAILERING 3**

- **NOTE:** If you'll be towing a trailer that, when loaded, will weigh more than 5,000 lbs.,* be sure to use a weight-distributing hitch, which uses spring bars to transfer some of the hitch weight forward onto the tow vehicle's front axle and rear-axle ratio combinations. Automatic transmission-equipped Avalanche 1500 models can pull up to 8,200 lbs., while the Vortec 8100 V8-equipped Avalanche 2500 model can tow up to 12,000 lbs., when properly equipped. If you have a load to pull, your vehicle has the strength and power you need. For complete information on Avalanche's trailering features, see the attached CD-ROM.

A NOTE ON CHILD SAFETY:

- Use safety belts and proper child restraints, even with air bags.
- Inflatable front seat belt restraints are designed to deploy only once. If a child restraint re-attaches to the same location, it will not prevent the front seat belt restraint from deploying a second time. Children are safer when properly secured in a rear seat. Never place a rear-facing infant restraint in the front seat of any vehicle equipped with an active air bag. See the Owner’s Manual for system information and details.
