**THE HEART AND SOUL OF A CHAMPION**

**MAGBEAM STRUCTURE**
A magnesium instrument panel beam spans the width of Monte Carlo. The cast beam is precisely shaped to package smaller components, helping reduce squeaks and rattles that can occur over time, especially in the heating, air conditioning and audio systems. It also provides a sturdy foundation for the steering wheel column, reducing vibration.

**RUST-FIGHTING BODY**
Two-sided galvanized steel on all exterior body panels, except the roof where it’s not needed, resists corrosion. And the exhaust system is made of long-lasting stainless steel with an aluminized stainless-steel muffler and tailpipe.

**STRUT TOWER-TO-TOWER BRACE**
A racetrack-inspired steel brace connects the front strut towers and enhances Monte Carlo’s precise driving response.

**STATE-OF-THE-ART ELECTRICAL SYSTEM**
Monte Carlo features a bussed electrical center at each end of the instrument panel, which houses all fuses, relays and splices for a given zone, making the electrical system easier to service.

**MONITORING SYSTEMS FOR OIL REPLACEMENT AND TIRE INFLATION**
A special monitoring system for oil quality lets you know when the engine oil needs replacing, based on your driving conditions. The Tire Inflation Monitor signals if there is a significant air pressure difference in any of the tires.

**ALUMINUM ENGINE CRADLE ENHANCES RIDE AND RESPONSE**
Monte Carlo has a noise- and vibration-free engine cradle made of lightweight, but stiff, extruded aluminum. It reduces vibration and noise.

**SAFETY-CAGE CONSTRUCTION**
A reinforced steel cage surrounds the entire passenger compartment, while its unique headliner is backed with corrugated material. The steel cage design and energy-absorbing materials in the roof header and front pillars helped make Monte Carlo one of the first cars to meet 2003 federal standards for head-impact protection.
