When the Volvo Duett arrived in 1953, there was nothing like it. It created a category all its own: the multi-purpose wagon. Improved and refined year after year, this is the 10th generation of our Swedish herrgårdsvagn and it defies comparison yet again. There’s more luxury here, more onboard intelligence, more practical space, and more of what we’re known for and proudest of—safety. What’s more, our dedication to safety is what promotes a joy of driving found in no other car. This is original thinking at its best. The all-new Volvo V70.
Not much has changed (in theory).
State of the art:
heating, power adjustments with memory,
automatic personal settings,
allergy-tested materials,
safety cage construction,
side and rear impact protection systems
—and we've just started talking about the front seats here.

Imagine the rest of the all-new Volvo V70 when the front seats alone are so thoughtfully designed. New safety, comfort and convenience features complement each other with elegance and intelligence throughout. Form follows function like never before. In addition, a powerful six-cylinder engine is available in a Volvo V70 for the first time as are two-stage booster cushions.

Whiplash Protection System (WHIPS)
During a rear-end impact, the seat backrest is pushed backwards together with the occupant relative to the seat cushion first in a parallel motion and thereafter in a tilting motion. During the motion, deformation elements in the recliner mechanisms deform and thus absorb some of the energy, reducing the impact to the body.
Anything else your majesty?

The elegant simplicity of modern Scandinavian design is well represented throughout the deluxe cabin and cargo areas of the all-new Volvo V70. Here you’ll find more comfort for passengers, more storage places for personal effects, and more cargo space, but you’ll find absolutely no room for compromise—every detail here is a clever, refined expression of form in praise of function.
2-Stage Booster Cushion (standard)
These integrated seats adjust to two heights to accommodate children of different sizes. Now even smaller children can be seated higher to enjoy a safer and more comfortable ride.

What’s more, the inflatable curtains in the all-new Volvo V70 have been extended by 24in, which, in combination with the height-adjustable booster cushions and the stronger body, gives the family more choices of different sizes, better protection in a side impact.

Sensible Air Quality System (IAQS) (optional)
IAQS monitors incoming air. If necessary, it will temporarily close external air vents to shut out carbon monoxide, ground-level ozone and nitrogen dioxide. Meanwhile, an active carbon filter prevents dust, exhaust particles, pollen and unpleasant odours from entering the car through the ventilation system.

Intelligent Driver-Information System (IDIS) (standard)
To help avoid distractions during critical driving situations, IDIS constantly analyzes your driving and will delay secondary information from the car or one of its onboard systems—such as text messages, radio or vehicle information—when it detects intense steering, braking or acceleration. As soon as things calm down, the delayed information is then presented. This is an active safety system that helps control information-induced stress levels.
Even cargo travels first class.

Cargo volume
The cargo volume of the all-new Volvo V70 is 36.3 cubic feet with the rear seatbacks up and 72.1 cubic feet with the seats folded. This includes up to 40 cubic feet in the front.
Power tailgate (optional)

The tailgate can be opened automatically three ways: with the remote control, using the switch on the dashboard, or by pulling the handle. To help minimize risk of injury, a sensor in the tailgate can be used to trigger automatic closing. Also, an anti-jam strip around the tailgate opening can detect obstructions to help avoid pinching fingers and things.

Loading systems

The floor of the cargo compartment features new Cargofix rails fitted with four sliding hooks that can be used to secure items. When not in use, the hooks retract into the load rails. Additional hooks are provided on both sides of the load compartment just below the rear side windows. Load carriers, load covers, and more accessories are available to ensure your cargo always travels first class.

Security

The closed tailgate—aided by the function of its elegant design—overlaps and locks the compartment hidden under the cargo floor. To keep this private storage area inaccessible to other users of the car, e.g., valet parking, you can set your private locking preferences to include the tailgate with your other lockable storage areas.

Fold down as much of the 40/20/40 split rear seat as you need to combine cargo and passengers comfortably and safely. The head restraints tuck conveniently out of the way, providing a flat-floored loading compartment. You can also add a floor-attached load securing net and a net pocket for each side panel. To conceal equipment in the load compartment, simply pull out the retractable load cover.

For unexpected shopping bargains and particularly bulky items, you can fold the front passenger backrest forward. This provides a long, flat-floored loading compartment from the tailgate to the dashboard if that's not enough. There's also a floor-mounted carrying system to keep your stuff high and dry.
That’s not a curve. That’s the road smiling.

Friendly surroundings are not only found inside the all-new Volvo V70. The exceptional handling and performance characteristics of this car extract great will from most any stretch of pavement, especially corners. The well-matched engine and transmission are not only highly efficient, but they also reinforce the feeling of safety that comes from the ability to accelerate instantly. Clearly, this all-new Volvo V70 was built to please more than just the cargo.

Fuel efficiency

Advanced engine technology and aerodynamics help lower fuel consumption and reduce emissions—a main contributor to global warming. Of course, all Volvo engines comply with strict international environmental requirements.
Smooth sailing, redefined.

The all-new Volvo V70 is well-equipped to take what comes and go with the flow. The sophisticated chassis is engineered to provide confidence and compose at every turn. And if any road tries to get the best of you, the standard DSTC traction control system can make all the difference. Of course, this is what you expect from one of the world’s safest cars.

Chassis and steering

The chassis makes the most of its multi-link rear suspension for smooth handling and precise steering. The 17-inch alloy wheels are standard on the V70 and 18-inch wheels are available. The front suspension struts promote quick response.

DSTC, Dynamic Stability and Traction Control, is a standard feature on the all-new Volvo V70 and it includes a number of functions that enhance both the safety and pleasure of driving. By comparing the rotation of the drive wheels and varying the power supply, DSTC helps maintain traction in nearly any situation.

All the cars in the range are equipped with front and rear disc brakes that are balanced for performance and comfort. The standard 225/55R17 tires with 8.75 inches of ground clearance help to maintain grip in nearly any situation.

At the core of the system, a gyroscope senses the car’s direction and compares this with steering wheel movements as well as the actual rotation of the rear wheels. The system is able to detect a potential skid and helps to counteract it by reducing the engine’s power output, or braking on one or more wheels. The anti-spin function can be disengaged—allowing some spin—to provide better traction in snow conditions.

By helping to prevent fishtails, spinouts, and rollovers, stability control technology like DSTC has been described as the most vital safety advance of the past decade. In fact, studies suggest it may be second only to seat belts in protecting drivers and passengers.

*Studies include those from the Swedish National Road Administration, the National Highway Traffic Safety Administration, the Insurance Institute for Highway Safety, and the University of Michigan Transportation Research Institute.*
State of the art technology once only found among the clouds is now available at road level. In this case, we’re talking about the advanced radar technology that monitors the vehicles driving in front of you for Volvo’s Collision Warning with Auto Brake system* and the Adaptive Cruise Control system.

Radar assisted traffic control is nothing new—if you’re an airline pilot.
Adaptive Cruise Control (ACC) (optional)*
ACC is designed for smooth traffic. You just select the desired speed and the minimum time gap to the vehicle in front of you. When the radar sensor detects a slower vehicle in front of you, the speed automatically adapts to that vehicle.

Distance Alert (optional)*
Activated at speeds over 18 mph, the system continuously registers the distance to the vehicle ahead. If that vehicle comes too close, a red warning light is activated in the lower section of the windshield. Distance Alert can be used even if Adaptive Cruise Control is not activated.

Collision Warning with Auto Brake (optional)*
Collision Warning with Auto Brake is designed to sense an impending collision and alert the driver to help avoid or reduce the severity of an impact. If the driver does not react to the warning and a collision is imminent, the brake system applies automatically up to 50% of its capacity. The sophisticated system uses a radar sensor behind the grille and a camera behind the windshield to continuously monitor the distance to the vehicle driving in front of you. If the system senses that a collision is likely to happen, it will alert the driver to act swiftly and apply the warning light on the windshield and an audible alarm. Moreover, the system supports driver-initiated braking by pre-charging the brakes and preparing for emergency brake application.

Emergency Brake Lights (EBL)
Active at speeds above 37 mph, the EBL system can sense the difference between normal and emergency braking. If it is an emergency situation, the brake lights and additional taillights will remain on for as long as the brake pedal is depressed or until braking force on the vehicle is reduced.

Blind Spot Information System (BLIS) (optional)
BLIS works using an advanced technology. The camera sensors help keep a lookout on either side of the car, even when your vehicle is preparing to change lanes. The system will alert you with an indicator light built into both front door posts. Together with the door mirrors, this helps you assess the feasibility of a lane change.

Limitations and availability: The characteristics of these systems are subject to changes based on vehicle usage. Even these sophisticated systems have limitations. It is the driver's responsibility to remain alert at all times. Certain road conditions, traffic and weather, or dirt and objects that obscure the radar and camera components, will reduce the efficacy of these functions.

Translated, first quarter 2008. Even these sophisticated systems have limitations. It is the driver's responsibility to remain alert at all times. Certain road conditions, traffic and weather, or dirt and objects that obscure the radar and camera components will reduce the efficacy of these functions.
Photogenic as it is, you may be surprised to learn it's the one taking the pictures.
Now supplemented by a digital video camera to help examine the road ahead, Volvo’s advanced driving system helps make driving more comfortable. Located between the rear-view mirror and the windshield, this digital camera makes it possible for the system to discern stationary objects from other road users and to register lane markings. If you are ever distracted or tired, the system’s ability to identify your lane—and any stationary vehicles in your lane—can help you reach your destination without incident and, might we say, picture perfect.

In addition to enhancing other features of Volvo’s advanced driving system, the digital video camera helps make it possible to introduce the Driver Alert System. The Driver Alert System includes two functions: Lane Departure Warning and Driver Alert Control.

### Lane Departure Warning (LDW) (optional)*

Lane Departure Warning uses the camera to help monitor your car’s position on the road. If you swerve out of your lane, the system will warn you. Of course you can choose between levels of sensitivity. In addition, you can turn the low pressure pre-tensioner being warned. If you intentionally cross a lane marker using the direction indicators, LDW is not activated. Primarily intended for use on highways, LDW is activated when the car’s speed exceeds 40 mph.

### Driver Alert Control (DAC) (optional)*

Using signals from the camera to calculate the direction of the road along with data from steering wheel movements, the Driver Alert Control can compare your driving behavior to your normal driving style and, after you deliberately cross a lane marker, an audible warning is given. At the same time, a message is displayed in the instrument panel suggesting it might be time for a break. Using the car’s menu system you can select preferences and activate the system.

*Available first quarter 2008. Even these sophisticated systems have limitations. It is the driver’s responsibility to remain alert and attentive at all times. Certain road conditions, traffic and weather, or dirt and objects that obscure the radar and camera components, will reduce the efficacy of these functions.
VNS.
Because winding roads and folding maps don’t mix.

The Volvo Navigation System (VNS) provides detailed maps direct from a DVD. Whenever you place the car in reverse, the VNS screen can help show what is directly behind the vehicle by using the optional park assist camera. Other information and entertainment components on the center console are easy to reach and simple to operate.

Integrated Bluetooth® hands-free system (optional)
Together with a compatible Bluetooth® GSM phone, this feature combines the benefits of the car’s infotainment system with wireless telephony. Caller ID and your telephone numbers are instantly displayed on the start-up screen, and you can switch freely from the hands-free system to the phone itself. The system is conveniently operated using the steering wheel controls, and it automatically remembers the mobile last used.

Information menu
Define your all-new Volvo V70’s comfort, convenience and handling settings according to your personal preferences using this simple computer interface. Depending on which technologies you have, this is where you configure audio and climate settings, Adaptive Cruise Control, seat and mirror positions, navigation and the Intelligent Driver-Information System.

Volvo Navigation System (VNS) (optional)
Volvo’s navigation system is positioned on top of the instrument panel and operated with a remote control at the steering wheel. When not in use, the screen retracts into the dash. This system provides navigational maps and voice guidance—in the language of your choice.

Rear Seat Entertainment (RSE) (optional)
With the dual screen RSE, two rear seat passengers can play a game or watch a film independently or together. The system includes the dual video screen display integrated into the fixed headrests for both rear seats, a multifunctional DVD front console with separate headphone inputs and an AUX input for game consoles and such. Wireless headphones are also available.
Volvo's modern sound system is among the best in class. The all-new Volvo V70 has a sound system that makes the most of your music. The world-class components are mounted in the dashboard—separately from the controls on the floating center console and the control buttons on the steering wheel.

**High Performance**

This is a powerful high-performance system. Each speaker is fitted with a powerful magnet and a large coil. Combined with the high-quality amplifier, this system produces incredible transients and high power—quite simply superb sound. This High Performance system includes:

- In-dash single CD
- MP3 and WMA compatible
- 4x40 W amplifier
- 8 High Performance speakers
- AUX input
- Steering wheel integrated remote control

**Options:**

- Rear seat audio console (optional)
- Incorporating sockets for personal headphones, the rear seat audio console allows passengers to choose between musical sources, songs or playlists. And, of course, lets you adjust the volume.
Registered guests only.

Intruders beware. The all-new Volvo V70 knows who belongs and who doesn’t. The Personal Car Communicator helps sort key holders from the crowd. Check your PCC when you return to your car and an on-board heartbeat sensor can warn you if someone unexpected is in there.

Avoiding confrontations of this sort can be most beneficial. There is also a level sensor available that can warn you if someone is attempting to tow away your car or steal your wheels.

**Personal Car Communicator (PCC) (optional)**

This convenience combines keyless drive with an interactive communication device. Just carry the PCC with you and the car unlocks automatically when you open a door. Start the engine by pressing a button on the dash. Lock the car by pressing a button in the door handle. If the alarm has been activated, the onboard heartbeat sensor will give you advanced warning if there’s somebody in your car and an opportunity to evaluate the situation safely.

**Ground lighting**

In the dark, ground lighting is activated with the remote or PCC. The lights are designed to make your car and your environment as safe as possible. The lights will be on while the PCC is within 65 to 110 yards of the car. Your car is locked.

**Remote controlled alarm**

With its doors, hood, tailgate and ignition, the alarm reacts to movement in the car or the breaking of a window. A level sensor can be added to deter thieves from jacking up your car and stealing your wheels. In an emergency situation, a panic button on the remote control can trigger the alarm for help.

**Approach and Home Safe lighting**

Activated with the remote or PCC, Approach Lighting provides a warm reception on a dark night. This consists of interior lights and ground lighting. Home Safe Lighting is activated with your headlight stalk as you leave your car and it provides a similar courtesy when entering your car. This feature includes low beam headlights to accompany you to your door.
"Safety is our promise. People trust us, and that’s a big responsibility. This is what we think about daily when we make our safety decisions. We have to maintain this trust—not only with words, but also with actions. That’s also why the safety in a Volvo always begins and ends in a real-life situation."

Ingrid Skogsmo, Director Volvo Car Safety Center

Inaugurated in 2000, the Volvo Car Safety Center in Göteborg is the world’s most advanced crash laboratory. Here, the purpose is to imitate traffic situations and crashes as they happen in real-life. We recreate crashes with all kinds of vehicles and road obstacles at almost every angle and at speeds of up to 75 mph. We perform realistic rollover tests and test cars off-road as well as against genuine Swedish granite rock-faces, as we test simulate impacts with wild animals such as a 1100 lbs Swedish moose. Of course, these crash tests also incorporate advanced crash test dummies representing a wide range of sizes and ages—from infants to full-grown adults. Every crash is thoroughly documented using high-speed cameras and broken down into fragments of thousands of seconds. We even store crashed cars for a period for future reference. In addition to countless computer simulations, we conduct over 400 full-scale crash tests each year. Many of these tests are based on what our Accident

This is where life starts.
Research Team discovers at the scene of a real accident. Since 1970, our researchers have investigated over 36,000 such accidents. This gives us the unique ability to learn what works in real life and what doesn’t—knowledge that helps us improve, innovate and help save lives.

Life-saving knowledge
Many of the safety features found in a Volvo are based on findings from the Volvo Accident Research Team. A few recent examples are the collapsible steering column, the energy-absorbing frontal structure, Volvo’s child safety equipment, the Side-Impact Protection System (SIPS) and the Whiplash Protection System (WHIPS).

Recreating reality into its smallest details
Advanced crash simulations are an important means to make realistic crash tests of separate components and their safety systems. Our crash sled can recreate the moment of collision, which is unique in the car world. This tipping affects the way occupants are restrained and can normally only be analyzed through expensive full-scale crash tests.

Virtual crash tests
Super-computers make it possible for us to recreate and analyze different crash situations six times a day without crashing real cars. We have the technology to test even very critical, rare events before they end up on the road and we can incorporate reallife data obtained from crash tests. This enables us to focus our resources where they are most useful.
This is living it.

Sweden. Other car manufacturers come here for final car testing under harsh and capricious conditions. For us, it’s home. This is where we live and drive, 365 days a year. So it’s no wonder Volvos are in a category of their own when it comes to active safety. Take, for example, our own proving ground situated with its 34 miles of test tracks—including different road types from all over the world. This is the top-secret facility where we scrutinize our car’s ability to support their drivers in all imaginable—and unimaginable—situations. On tracks that are to reveal any weak spots, we expose all new Volvo models to extreme forces and conditions during thousands of test miles—not to mention the distances driven on ordinary Swedish roads. This is where innovation confronts reality. This is also where we evaluate the interaction between the car and the driver because the most important safety feature in a Volvo is the driver. The more efficiently the car’s onboard systems support you, the safer it is for you and your passengers.
NEW TECHNOLOGY FOR A NEW DRIVING EXPERIENCE

Ultimately, no car is safer than its driver. So we loaded your all-new Volvo V70 with state-of-the-art technology to support and help you make the right decisions. Inspired by technology normally found in fighter aircraft, systems like Volvo’s Intelligent Driver Information System (IDIS) senses your workload and will withhold incoming phone calls and other peripheral information in stressful situations. To further help assist you, there’s the option of the radar based Adaptive Cruise Control with Collision Warning and Auto Brake. Apart from enhancing driving comfort, this can be useful to help you maintain the distance from the car in front of you. Collision Warning warns the same while sensors are in help you avoid a collision. If a rear-end collision is imminent, the system will warn the responsibility away from you as driver. This feature is always on your hands. But if these technologies help make you more alert and relaxed as driver, they will also contribute to your overall safety and well-being in your Volvo.

Emergency Brake Light (EBL)

Beyond the immediate response of the car’s brake lights, EBL warns other road users about your emergency braking status. When the car’s deceleration exceeds 0.7g, or when the anti-locking brakes are activated, an additional taillight on each side of the vehicle illuminates.

Hydraulic Brake Assist (HBA)

Helping the driver stop the car in the shortest possible distance, HBA employs a combination of a vacuum and hydraulics. This ensures that optimal braking power is always available when it’s needed. Additionally, the hydraulic power assistance keeps brake pressure even through prolonged brake usage.

Ready Alert Brakes (RAB)

Reducing the braking distance further, RAB uses information such as the sudden release of the accelerator or the Adaptive Cruise Control to anticipate emergency braking. It moves the brake pads closer to the discs to speed brake response.

Active Bi-Xenon Lights (ABL)

Helping you to see around bends at night, this microprocessor controlled lighting system uses data such as steering wheel angle and car speed. A daylight sensor disengages the system during daytime to extend its lifespan.

Double your illumination—twice

Designed in a country characterized by cold and darkness for several months a year, the headlights in a Volvo V70 combine the latest in light and technology to expand and help you make the right decisions. Inspired by technology normally found in fighter aircraft, systems like Volvo’s Intelligent Driver Information System (IDIS) senses your workload and will withhold incoming phone calls and other peripheral information in stressful situations. By using your workload as an indicator, the system will withhold incoming phone calls and other peripheral information in stressful situations. To further help assist you, there’s the option of the radar based Adaptive Cruise Control with Collision Warning and Auto Brake. Apart from enhancing driving comfort, this can be useful to help you maintain the distance from the car in front of you. Collision Warning warns the same while sensors are in help you avoid a collision. If a rear-end collision is imminent, the system will warn the responsibility away from you as driver. This feature is always on your hands. But if these technologies help make you more alert and relaxed as driver, they will also contribute to your overall safety and well-being in your Volvo.

Emergency Brake Light (EBL)

Beyond the immediate response of the car’s brake lights, EBL warns other road users about your emergency braking status. When the car’s deceleration exceeds 0.7g, or when the anti-locking brakes are activated, an additional taillight on each side of the vehicle illuminates.

Hydraulic Brake Assist (HBA)

Helping the driver stop the car in the shortest possible distance, HBA employs a combination of a vacuum and hydraulics. This ensures that optimal braking power is always available when it’s needed. Additionally, the hydraulic power assistance keeps brake pressure even through prolonged brake usage.

Ready Alert Brakes (RAB)

Reducing the braking distance further, RAB uses information such as the sudden release of the accelerator or the Adaptive Cruise Control to anticipate emergency braking. It moves the brake pads closer to the discs to speed brake response.

Active Bi-Xenon Lights (ABL)

Helping you to see around bends at night, this microprocessor controlled lighting system uses data such as steering wheel angle and car speed. A daylight sensor disengages the system during daytime to extend its lifespan.
Designed for life.

In a frontal collision, the patented frontal structure with its multiple deformation areas in different kinds of steel will yield to help absorb crash energy—developing the all-new Volvo S70's protection qualities, we have focused on frontal collisions at both higher speeds and with heavier vehicles. The concept power train is designed to help optimize aerodynamics and keep the vehicle stable. The position of the various modules and sub-assemblies on the front collision are set up to help keep components safely positioned in the cabin. The additional help provided in the engine compartment from a braking system and fuel tank goes toward this end. This also helps protect the driver.

The unique geometry of the frontal structure and longitudinal steel struts under the dashboard help to keep components outside the cabin. This also helps protect the legs and feet.

The unique geometry of the frontal structure and longitudinal steel struts in the doors helps disperse crash energy away from the front to the rear of the car, further helping to reduce the strain on the occupants.

Inside the car, occupant protection is increased by optimizing the functions of all safety restraint systems. The seat belts with pre-tensioners on all seats and force limiters on the front seats interact with other safety features, such as the deformable steering column and adaptive airbags, to help keep the occupants out of harm's way.

The interior is designed to help absorb as much crash energy as possible. The ignition switch, for example, is positioned on the dashboard away from the driver's knees.

"To me, safety is beautiful. Every detail in a Volvo—from the interior ergonomics and the fantastic seats, to the body's powerful shoulders and softly rounded front—are there for safety reasons. This is functionality that goes hand in hand with distinctive design and it sure looks good!"

Steve Mattin, Design Director, Volvo Car Corporation

It is this interaction between the different safety systems that determines how safe a car is. Not the number of safety features itself. First, the driver must have the right conditions behind the wheel: seats, instruments, controls, visibility, and lighting—all contribute to safety when they are adapted to support the driver. Then there's how the car behaves on the road. The way the chassis interacts with brakes, steering and sensor stability-enhancing systems not only determines how much fun the car is to drive—but is also crucial in helping the driver maintain control in challenging situations. Finally, if an accident can't be avoided, you and your passengers are surrounded by a wealth of interacting protective systems. Hopefully you'll never have to experience them in action, but it can be reassuring to know they're there to help protect you.
IN A ROLL-OVER, the extremely sturdy safety cage will help protect the occupants while the seat belts help keep them restrained in their seats. If the car has initially been hit from the side, the inflatable curtain (IC) is activated to help protect the heads of the outboard occupants and help keep them inside the car. The IC remains inflated for several seconds to help provide extended protection regardless of whether the windows are up or down. The interior also adds to occupant protection. Additionally, the roof structure is reinforced to help keep the passenger compartment intact.

IN A REAR IMPACT, the rear deformation zones will help absorb as much of the crash energy as possible before it reaches the cabin. Similar to the front, the rear safety structure features an optimized mix of different grades of steel to provide strength and carefully controlled deformation. The fuel tank is designed to remain unperforated in most of the rear area. Even the rearward seating positions are designed to have no effect on the energy absorption.

Inside the cabin, the head restraints not only help protect the neck and spine, but also help protect the head from shattering glass. Integrated in the front seats, Volvo’s unique Whiplash Protection System (WHIPS) cradles the spine in a controlled manner. The system is activated by a collision of sufficient force from behind. Independent research has shown that WHIPS is one of the most effective in the world. Since its introduction in 1998, it has helped reduce long-term consequences of accidents by more than 50%.

IN A SIDE IMPACT, the distance between your chest and the colliding car is about 12 inches. So how can we best use this distance to help protect life? To provide strength and carefully controlled deformation in a side impact, the door and side structure of the Volvo V70 are built with ultra high strength steel and softer grades of steel. For example, the unique one-piece hydro-formed panel element is shaped to allow maximum energy absorption in a range of side impacts. The door and side structure are designed to shift outside the vehicle but to stay in contact with the door. The dual-chamber side airbags in the front seats help protect the occupant’s chest and hip—the hip chamber inflates to five times higher pressure than the chest chamber to help absorb maximum impact where the body is most fragile. The inflatable curtain (IC) adds protection for the head and helps keep the occupants inside the car both in the front and the rear. The IC also extends 3 inches further to help keep passengers intact.
Environmental care.
Part of our commitment to safety and your well being.

At Volvo, the well being of people is at the core of every decision we make. And just like safety, we believe that environmental care requires a holistic approach from the very start. For this reason, Volvos are built in some of the cleanest automotive plants in the world.

Air quality control
A cabin filter helps to prevent dust and pollen from entering the car through its ventilation system.

Testing materials for harmful substances
To make life more comfortable for people with allergies or asthma, upholsteries and interior textiles comply with the Oeko-Tex Standard 100—an international benchmark ensuring that textiles and leathers are tested for certain allergy inducing or harmful substances. All interior metal details are tested with regard to contact allergies so parts such as keys, door handles and seat belt buckles comply with the same standards for nickel leakage as high quality jewelry.
Fuel efficiency
To increase fuel efficiency and reduce carbon dioxide emissions, all Volvo engines have advanced electronic management systems and low internal friction. Other factors that contribute to fuel economy include efficient transmission systems, aerodynamic body design, the use of various grades of steel to minimize body weight, and a trip computer displaying current and average fuel consumption.

Emission control
Volvo engines meet stringent international emission requirements. Advanced emission control technology eliminates between 95 and 99% of the carbon monoxide, hydrocarbons and nitrogen oxides in exhaust fumes. The emission control system is designed to provide full effect as rapidly as possible after a cold-start—which emissions are at their highest. Right down to the fuel filler door, the fuel system is designed to reduce emissions through evaporation when the car is moving or at a standstill.

Clean all its life
Every Volvo begins its relationship with the environment at the earliest stage of its design. Volvos are built in some of the cleanest automotive plants in the world. What’s more, our Environmental Product Information (EPI) allows you to choose a Volvo model on the basis of its overall environmental performance.

To choose a Volvo model on the basis of its overall environmental performance, see our Environmental Product Information (EPI) guide at www.volvocars.com/EPI
Adaptive Cruise Control (ACC)
ACC is designed for smooth traffic flow. You just select the desired speed and the minimum time gap to the vehicle in front of you. When the radar sensor detects a slower vehicle in front of you, the speed automatically adapts to that vehicle.

 Sirius satellite radio
Sirius satellite radio is now available for your Volvo. Volvo has joined forces with Sirius to offer an integrated satellite solution that is sure to provide endless listening enjoyment.

Blind Spot Information System (BLIS)
BLIS uses rear-facing cameras installed in the door mirrors to keep a lookout on either side of the car. As a vehicle enters your blind spot, the system alerts you with a lamp built in to the front door post–left or right. Together with the door mirrors, this helps you assess the feasibility of a lane change. BLIS is activated once the car exceeds 6 mph, and reacts to almost any type of vehicle from a motorcycle upwards, day or night.

Rear Seat Entertainment (RSE)
With the dual screen RSE, two rear seat passengers can play a game or watch a film independently or together. The system includes two 7-inch wide screen displays integrated in the front seat headrests and at the back of the central armrest there's a multifunctional DVD console with separate headphone inputs and an AUX input for game consoles and such. Wireless headphones are also available.

Park assist
Activated when you engage reverse gear, rear park assist helps you when reversing into tight spaces. The audio system is turned down and a pulsating sound from the rear loudspeakers becomes a continuous tone as you approach an obstacle. Front park assist performs a similar function at the front of the car by alerting you to any obstacles in the bumper area. Park assist sensors are integrated in the bumpers and color-coordinated.

Volvo Navigation System (VNS)
Volvo's Navigation System is positioned on top of the instrument panel and controlled with a remote control at the steering wheel. When not in use, the screen retracts into the dash. This system provides navigational maps and voice guidance—in the language of your choice.
Volvo's accessories help you make your Volvo V70 even more suited to your personal needs. They are the only ones that have been tested to meet Volvo's exacting safety, quality, and environmental requirements. You can also rest assured they’re a perfect match to the technology and design of your Volvo.

See the 2008 Volvo Accessories brochure for a complete list of Genuine Volvo Accessories.

FOR DRIVING FREEDOM

Park assist, rear and front
Parking assistance camera

FOR YOUR ENTERTAINMENT

Volvo iPod music interface
Satellite Radio
Rear Seat Entertainment System
with Dual DVD player
6 Disc in dash CD changer

FOR PRECISION CARGO

Sun screen, rear doors
Sun screen, cargo area
Roof rack, stainless steel
Roof rack, aluminum
Bumper guards, front and rear

CUMBER Package
This unique package offers five support systems.
- Adaptive Cruise Control
- Collision Warning with Full Auto Braking
- Distance Alert
- Lane Departure Warning
- Driver Alert Control
The all-new V70 specifications.

ENGINE

Six-cylinder in-line all-aluminum engine.

- Double overhead camshafts, 24 valves with Variable Valve Timing (VCT).
- The 3.2 engine features Variable Intake System (VIS) and Cam Profile Shifting (CPS) on the intake camshaft.
- Electronic engine management system.
- Three-way catalytic converter with heated oxygen sensor.

This highly compact all-aluminum six-cylinder engine meets high expectations for performance, comfort and environmental care.

Advanced engine technology, such as the variable geometry intake manifold, helps increase torque over a wide speed range and ensures power at high revs. And depending on your driving style and the situation, the intake valve closing is controlled by the 3.2 automatically switches between economy and performance modes to optimize efficiency.

The engines' compact design aids safety performance in a frontal collision. The latest generation of fast response emission control technology ensures that the engines comply with stringent environmental standards such as California's ULEV II.

Volvo V70 3.2 (235 hp)

- Engine type: 3.2-liter in-line six-cylinder engine
- Max power output: 235 hp at 6200 rpm
- Max torque: 236 ft/lbs at 3200 rpm
- Acceleration 0–60 mph, auto: N/A
- Top speed, auto: N/A
- Fuel consumption, mpg, mixed cycle, auto: N/A
- Transmission: Six-speed Geartronic automatic

DRIVELINE

- Transverse engine. Front wheel drive.
- Six-speed Geartronic automatic with lock-up function, winter mode and mode for manual shifting.

CHASSIS

- Front suspension with spring struts (McPherson), anti-dive and anti-lift function. Active multi-link independent rear suspension.
- Anti-roll bars front and rear.
- DSTC (Dynamic Stability and Traction Control).
- The rigid body and wide wheelbase enable optimal suspension performance, balanced handling and a high level of comfort. The front and rear suspension is biased to provide stable braking and assured steering.
- The DSTC system calls in the drive of the axle wheels begins to lose traction or if a skid is imminent.

STEERING

- Power-assisted rack and pinion steering. Tilt and telescopic steering wheel column, 2.8/2.6 turns lock to lock. Turning circle 13.8 feet (depending on trim).

BRAKES

- Power-assisted anti-locking disc brakes (ABS), ventilated discs front.
- Stability and Traction Control. Optimized hydraulic braking system.
- Fading Brake Support. EBD (Electronic Brake Distribution) between the front and rear brakes.
- The Power Parking Brake (PPB) makes moving off from steep gradients easier.

FUEL TANK

- 18.5 gallons
Meet the family.

To live life is to care about it.

Every moment in a Volvo is a moment designed to celebrate life. At the full of twists and turns, up and down, the little things as well as the big ones. Of course, to live life to its fullest isn’t just about you caring for others. It’s important as well.

For eighty years, we have helped save lives on roads around the world. Nevertheless, when it comes to improving automobile safety, we will never be satisfied. And while we’re seeking new solutions, our existing safety systems are preventing many accidents from happening and providing some real protection when they do.

Our passion for life means looking after our children’s children, too. Which is why we try to balance the needs of our company with those of society. With this bigger picture in mind, we develop engines and technology that have less impact on our environment. This approach also explains why we pay so much attention to your immediate environment in the car. Simply put, we care about you and the whole circle of life.
