This must be what Newton meant when he said a body in motion tends to stay in motion. Because once you start up the 2002 MR2 Spyder and feel the thrust of its all-aluminum 1.8-liter 16-valve VTEC engine at your back, it's not likely you'll be stopping for a while. But just in case a perfectly balanced midship-mounted engine in a lightweight rigid chassis isn't enough to make you take the long way to your destination, keep reading. We gave the MR2 Spyder a few other performance-enhancing features. And they just might make you forget where you were headed in the first place.

The faster you go, the more control you need. Hence MR2 Spyder's long wheelbase, short overhangs, MacPherson struts and ventilated disc brakes with an Anti-lock Brake System (ABS). And just to add another layer of adhesive between the car and the road, we gave it air-bleeding tire sputts that actually help stick it to the ground. Giving you the confidence to unleash all 128-hp tech horses under the artful direction of a 5-speed manual transmission. Or you can choose our revolutionary sequential manual transmission. One with no clutch pedal. No shifting errors. Which means no excuses for darning yourself the true sports car experience that is MR2 Spyder. Now where was it you were heading again?

Sequential manual transmission.
